Chalmit Zone 1 Linear Protecta

Following our update on 6th August 2024 where we laid out our transition timeline for our Protecta range. After extensive discussions with our key component suppliers, we can now provide our revised dates:

LED

- 31st December 2024: Final order for the current Protecta III LED & Retrofit Gear Tray
(Part codes PRGE/*/LE* & PRRE/*/LE*)
- Replacement control gear for Protecta III LED will continue until all stocks have been exhausted. We envisage this to be in 2025/26 but this estimate is fully dependent on demand levels seen. If a site requires spare parts beyond this indicative timeline, we encourage stocks to be purchased asap.

Fluorescent

- ^End of Q2 2026: Final order for Protecta III FLUORESCENT
(Part codes PRGE/*/BI*)
- Replacement control gear for Protecta III FLUORESCENT will continue until all stocks have been exhausted. We envisage this to be in 2026/27, this estimate is fully dependent on demand levels seen.

^The timeline of conventional Protecta (fluorescent) and replacement components is dependent on the continued availability of all key components.

For all Protecta, our intention is that batteries will continue to be available. We currently have no indication from suppliers that this item will be discontinued.

We trust this clarifies our position. Please be assured of our ongoing transparency and cooperation during this period.

Thank you for your ongoing support.
